

Textile Lifting Slings

Yale webbing slings and round slings are produced from high-tensile quality polyester (PES) in accordance with DIN EN 1492, parts 1 and 2. The highly flexible and versatile material exerts evenly distributed pressure on pressure-sensitive and tension-sensitive loads; it is not subject to material ageing or brittleness and is heat-resistant up to +100°C.

Lashing Systems

Yale lashing belts are produced from polyester (PES) according to DIN EN 12195-2. The extremely resilient belt material is resistant to stretching and abrasion; it guarantees a high load bearing capacity and a long service life. All Yale lashing belts are stretched belts, thermally fixed and protected against abrasion.

Personal Protective Equipment

Yale personal protective equipment are produced in accordance with the valid directives and standards. They ensure a high degree of safety, when they are used appropriately. With its long service life the personal protective equipment helps to avoid damage to property and personal injury.
